

Paint Protection Film General Terms and Conditions

About Paint Protection Film

Paint protection film is an 8mil film designed to protect your vehicle's paint from most rock chips and light scratches. It is warranted for 10 years against yellowing, cracking, and blistering. However, there is no warranty if the film is damaged in an accident or from debris. No surface damage to the film is warrantable.

Drying Time

Your new paint protection film will take 3-4 weeks to fully cure, depending on weather conditions. Do not wash your vehicle for 7 days. Moisture bubbles and minor film imperfections will cure over the course of a few weeks. Never use high pressure near the seams of your PPF.

Condition of Vehicle for Paint Protection Film Installation

Factory paint is not perfect. Your new car more than likely may have several blemishes, drips, runs, and nibs that may visually affect the looks of the installation once PPF is applied. The client waives and releases us from any damage claims where PPF has been applied to a non-OEM paint surface.

Paint

If improperly prepped and painted, the paint on repainted panels/OEM paint may lift. By authorising us to proceed with the installation or removal, the client hereby acknowledges the risks, waives any claims against us, and agrees that we will not be liable in the event that damage does occur during the installation or removal process. Occasionally, during the installation, a piece of film may need to be removed and redone. If the paint is damaged in the process, we are not liable.

Paint Chips

PPF is to prevent your vehicle from future rock chip damage. However, due to the unevenness of the paint surface, PPF installation over rock chips may look like contamination after the installation.

Installation

Pre-cut kits involve stopping short of edges around badges and other parts. PPF is a sacrificial layer and not completely invisible.

Expose Edges and Seams

Debris builds up over time on exposed edges/seams and is more visible on light-coloured vehicles. We recommend ceramic coating your vehicle to reduce debris buildup. Due to debris buildup, there is no warranty or reapplication of film.

Badge, & Decal Removal

Badge and decal removal may damage the paint. By authorising us to proceed with the removal, the client hereby acknowledges the risks, waives any claims against us, and agrees that we will not be liable in the event that damage does occur during the removal process.

Imperfections

Though we strive for perfection in our installations, due to the nature of the product and environment, some degree of dust contamination and/or minor imperfections may be present in every PPF application. Also, preexisting flaws, scratches, and rock chips on the paint are often much more noticeable after the PPF is installed. PPF may have minor imperfections like orange peel and small nibs. Used and older vehicles will have more imperfections due to age.
